

NEW! ISO CHECK EBS/ABS SELF-DIAGNOSING LEAD

The ISO Check visually alerts you if there is a problem with the Tractor-Trailer dedicated connection. ISO Check glows green if trailer EBS is all ok, but will turn red if there's a problem.

How it works:

Measures voltages on all Power -CAN-Earth pins.

- If all are ok, it glows **GREEN**
- if there's a fault, it glows **RED**

- Ensures compliance for Trailer EBS.
- Quick and easy "Go/No Go" as trucks pull out of yard.
- Reduces risk of points under OCRS with DVSA.
- Reduces risk of accident or roll over with the trailer.
- Reduces time & cost of vehicle maintenance.
